EVNTR – Simplifying Events, for Everyone

Hosting a gathering? Planning a tournament? Organizing a local meet-up or workshop? Managing events, no matter the size, shouldn't require complex tools or platforms meant for large enterprises.

EVNTR is a mobile app designed to help anyone create, promote, and manage events in a simple, intuitive way. Whether it's a private party or a public gathering, EVNTR puts everything in one place. without unnecessary features, costs, or complexity.

Why EVNTR?

Unlike typical platforms that:
- Focus only on large-scale or commercial events
- Require third-party tools for communication or check-in
- Are bloated with features that small organizers don't need

EVNTR offers:

- **Event creation in minutes** — Define the title, description, date, and visibility.
- **Audience flexibility** — Create public or private events and manage access with ease.
- **Centralized participation** — Allow guests to register, view details, and receive updates in real time.
- **Built-in status tracking** — Track participation status (e.g., "going", "interested", "not attending").
- **Mobile-first simplicity** — Designed natively for Android with a clean, responsive interface.

Who's it for?
- **Students** planning academic or social events.
- **Community organizers** who need a lightweight, accessible tool.
- **Hobby groups** looking to manage meetups without social media clutter.
- **Anyone** who wants to share and manage events without hassle.

The Mission

EVNTR was built to empower group organization, streamline small-scale event planning, and give people a reliable tool to bring others together. Whether for fun, learning, or collaboration.

While the project was paused to prioritize **QuickFix** (also available on my GitHub), **EVNTR reflects a strong foundation in mobile development, real-world app design, and practical user flows**. It remains a valuable part of my journey as a developer and product builder.
